

25 tricks to level up CLAUDE DESIGN

A ROBONUGGETS GUIDE

Every trick from the video, from design systems to motion graphics, with every resource linked and every prompt ready to copy.

README

WHAT THIS IS - all 25 Claude Design tricks from the video, in the same order. Each tip has what it is and why it helps, every link, and the exact prompt to copy.

HOW TO USE IT - start with the checklist on page 3. You can send this whole PDF to your AI agent and ask which tips apply to your setup, or ask it to explain any tip in more detail. Easy tips take minutes. Advanced tips take longer to set up.

THE COMMUNITY - how we use all of this for real lives at <https://www.skool.com/robonuggets>, where we build and sell AI systems, and master Claude Code and Claude Design along the way.

Contents

Start here	the one question to ask your agent, plus a checklist of every tip	p. 3
Easy	tips 01 to 07: design systems, fonts, copy	p. 4
Intermediate	tips 08 to 19: images, skills, components, icons	p. 6
Advanced	tips 20 to 25: motion, /design, /tweak, your own design OS	p. 11
Where this goes next	the community	p. 14
Every link	all the resources in one list	p. 15

Start here

You don't need every tip. What you build and which tools you use decide which ones help. This PDF is written so you can send it straight to your AI agent and ask:

"Which of these apply to my setup?"

Your agent can look at your projects and tools and tell you which tips fit. Then tick them off below as you go.

EASY

- | | | | |
|--|------|---|------|
| ☐ 01 Design systems: create one, or make one from a deck, website, or screenshot | p. 4 | ☐ 02 Give Claude 2,000+ design styles | p. 4 |

| ☐ 24 Transcript to motion graphics | p. 12 | ☐ 25 Build your own design operating system | p. 13 |

Easy

7 tips. The basics. Set these up once and every design you make starts from a better place.

01 Design systems: create one, or make one from a deck, website, or screenshot

SETUP

A design system is the rulebook for how your brand looks: colours, fonts, spacing and components. It's where everything starts when you design with Claude, or any AI agent. You don't have to start from scratch: a deck, a website or a screenshot you like can become one, and Claude pulls out the colours, fonts and components for you.

LINKS <https://claude.ai/design>

HOW In Claude Design: **Design systems** > **Create design system** > describe the business > add fonts, logos and assets > **Continue to generation**.

OR START FROM SOMETHING YOU LIKE (ATTACH A DECK, A SCREENSHOT, OR PASTE A WEBSITE URL)

I love this. Turn it into a design system.

Worth knowing: Button names in Claude Design change as the app updates, so the labels in your version may differ slightly. The idea stays the same: describe the business, add your assets, and let it generate the system.

02 Give Claude 2,000+ design styles

RESOURCE

Refero Styles is a free gallery of over two thousand real design systems, written so Claude can read them, with the colours, type and spacing laid out. Open one you like, copy the design system, paste it into Claude with your tweaks, and you get a high-quality system in one go.

LINKS <https://styles.refero.design>

HOW Open a style you like > copy its design system > paste it into the prompt below with your tweaks.

PROMPT - COPY THIS

Use this design system for everything you build me from now on, with these tweaks: [your tweaks]
[paste the design system]

Worth knowing: Refero doesn't have one single Apple system. It has Apple product pages (like iPhone, AirPods and Watch) that you can use the same way.

03 Let Claude shortlist the top three

PROMPT

Don't browse a gallery of thousands of designs yourself. Give Claude the link and let it pick the three design systems closest to your business, with the links and a reason for each. It works with Refero and with any other design system gallery you find.

LINKS <https://styles.refero.design>

PROMPT - COPY THIS

Go through styles.refero.design and find me the three design systems closest to my business: [one line on what you do and who it's for]. Give me the three links and one line on why each fits.

Worth knowing: The Refero gallery loads with JavaScript, so Claude may not be able to read all of it from a link. If the answer looks thin, open the gallery yourself and paste in the links of 10 to 20 styles you like.

04 Build design systems in Claude Code

SKILL

The Claude Design web app is great, but it's web-based, so it can't reach the files on your computer unless you upload them. In Claude Code, or Claude Cowork, a design system is just a custom skill that holds it. Make a skill like /duolingo once, and every time you call it, Claude builds in that style.

LINKS

<https://www.duolingo.com> · <https://design.duolingo.com> · <https://code.claude.com/docs/en/skills>

PROMPT - COPY THIS

Make me a skill called /duolingo. Research Duolingo's visual style from duolingo.com and its brand guidelines: colours, typography, corner radius, illustration and motion style, tone of voice. Write it into the skill as a design system with exact hex codes and sizes. Whenever I run /duolingo, build what I ask for in that style.

Worth knowing: Most tips in this guide also work in Claude Code, but not all: the Tweaks panel (tip 23) and the Refero copy-paste flow are Claude Design features, and /design (tip 22) is Claude Code only. Duolingo is just the example; swap in any brand you're allowed to take inspiration from, or your own.

05 Fonts: Fontshare and Fontesk

RESOURCE

The fastest way to spot a vibe-coded design is the font, because beginners keep whatever default Claude picks. Grab a font that fits your brand from Fontshare or Fontesk, and use Fontjoy if you need a heading and body pairing. Then name it in your prompt, or upload the font file to your design system.

LINKS

<https://www.fontshare.com> · <https://fontesk.com> · <https://fontjoy.com> · <https://www.fontshare.com/fonts/switzer>

HOW

1. Pick a font that fits the brand. 2. Need a heading + body pair? Generate one on Fontjoy. 3. Check the licence (commercial use). 4. Name it in the prompt, or upload the font file to your design system.

PROMPT - NAME THE FONT (SWITZER IS THE EXAMPLE)

Use Switzer for all headings and body text.

Worth knowing: Fontshare fonts are free for commercial use under the ITF Free Font License. Fontesk sets a licence per font, so not every font there is free for business use. Check the licence on the font's page before you ship.

06 Copy: study the top five in your niche

PROMPT

If the words in your design sound like AI wrote them, you lose the viewer even when the visuals are perfect. Ask Claude to study the top five players in your niche first, note the patterns in their copy, and add those patterns to your design system. You start from best practice instead of AI-speak.

PROMPT - COPY THIS

Go through the top five companies in my niche ([niche]). Tell me what they all do in their headlines, buttons and first screen that the weaker ones don't. Add those patterns to my design system as copy rules, then rewrite my page copy to match: one idea per screen, no AI-sounding words.

BEFORE > AFTER

Get started > Start free

The fun way to learn AI > Everyone uses AI. Almost nobody is good at it.

Worth knowing: Name your niche clearly in the brackets. The more specific it is (for example "bookkeeping software for small cafes"), the more useful the five companies it picks.

07 Mix and match design systems

TECHNIQUE

To get an original design of your own, mix and match. Open the system you're working in, add other design systems to the chat, and tell Claude which parts to take from each, like the type from one and the colour and motion from another. You end up with a blend that looks like yours, not a straight copy of a brand you like.

LINKS <https://claude.ai/design>

HOW 1. Open the design system you're working in. 2. Add the second design system to the chat. 3. Say which parts come from where.

PROMPT - COPY THIS

Take the typography from the first system and the colour palette and motion from the second, and merge them into one system for [brand].

Worth knowing: How you add a second system to the chat can change between app versions. If you can't attach it directly, paste its design system text or its project link into the chat instead.

Intermediate

12 tips. Make your frontend designs and marketing materials look more professional.

08 Let Claude generate images and videos

SETUP

Claude Design can't make images or videos on its own, but you can link Claude to a generator. Kie AI gives you most of the big image and video models in one place, and you only pay for what you generate. It's also one of the cheapest providers out there. The easiest way to connect it is to send the prompt below to Claude Code and let it set Kie AI up for you.

LINKS <https://kie.ai> · <https://kie.ai/pricing> · <https://docs.kie.ai> · <https://github.com/felores/kie-cli-mcp>

HOW Go to kie.ai, sign in and get an API key. Then send the first prompt below to Claude Code.

PROMPT - SEND TO CLAUDE CODE

Connect yourself to Kie AI so you can generate images and videos for my designs. My API key is in [.env / where it lives]. Use the Kie API docs at docs.kie.ai, or the community MCP felores/kie-cli-mcp if that is quicker. Test it with one image, then save the steps as a skill called /kie so any design can call it.

THEN, IN ANY DESIGN

Generate a hero image for this section in the brand style, 16:9, no text in the image.

Worth knowing: Kie has no official connector or MCP (an MCP connects an outside tool to your agent), only its API and a small community MCP (felores/kie-cli-mcp). That's why Claude Code sets it up, not a custom connector inside the Claude Design web app. You buy credits and each generation uses some, so check the price per model on kie.ai/pricing before a big batch. Kie bills separately from your Claude plan. Treat your API key like a password and keep it out of anything you share.

09 Reference another project

TECHNIQUE

When you start something new, point Claude at a project you already finished and tell it to reuse that project's design system and assets. Any work you've already done becomes your starting point, instead of a blank page.

HOW

Claude Design: open the finished project and copy its URL, then paste it into a new session with the first prompt.
Claude Code: use the second prompt.

PROMPT - CLAUDE DESIGN, WITH THE PROJECT URL

Use this project's design system, assets and decisions for everything we build here: [URL]

CLAUDE CODE VERSION

Find my past session where we built [project], and use its design system and assets for this build.

Worth knowing: Claude Code saves your past sessions on your computer, but it has to search for them. Pointing it at the project folder is the most reliable way to carry a design over.

10 Curate a reference library

HABIT

Your taste gets better the more great designs you see. Save the ones you like from places like Dribbble, Awwwards and X into your own library, so you can open it for inspiration or have Claude reference it on future builds. We built a simple Chrome extension, RUBRIC References, that saves a page with a screenshot and a note in one click. The prompt below builds your own version.

LINKS

<https://dribbble.com> · <https://www.awwwards.com> · <https://x.com>

PROMPT - PASTE INTO CLAUDE CODE

I want a Chrome extension that saves design inspiration with one click.

- One toolbar button: it screenshots the current viewport, saves the URL, the page title, and a one-line note I type
- Everything saves to a local folder as an image plus a JSON entry
- A local HTML page shows all saved references as a masonry wall with search and tag filters, dark and light
- Manifest V3, no external services

Ask me three questions before you build: where the folder lives, what tags I use, and whether I want it to work on YouTube too.

Worth knowing: Manifest V3 is the current format for Chrome extensions. You load your own extension from chrome://extensions with Developer mode on, then Load unpacked.

11 impeccable: the de-slop skills

SKILL

Impeccable is a free design skill with a whole set of commands to de-slop a website. It audits things like hierarchy, spacing, type, accessibility and empty states, then fixes them. It's great for polishing, and it turns a good draft into a professional one.

LINKS <https://github.com/pbakaus/impeccable>

HOW Install it from the repo link above (its README has the steps), then run it on a page.

PROMPT - COPY THIS

Run impeccable on this page. Audit hierarchy, spacing, typography, accessibility and empty states, fix what you find, and show me the before and after.

OR THE SHORT VERSION

Make this bolder.
Make this quieter.

Worth knowing: The repo describes it as 1 skill with 24 commands. The audit list above covers several of them: /audit checks accessibility, performance and responsive layout, and /critique checks hierarchy.

12 Make a tone-of-voice skill

SKILL

AI writing is easy to spot unless you refine it with your own voice. Build a tone of voice skill with your banned words, the way you speak and your own lines. Then add ready-made best-practice rules on top, like Simplified Technical English, Google's developer documentation style guide or Apple's style guide.

LINKS <https://asd-ste100.org> · <https://developers.google.com/style/tone> · <https://support.apple.com/en-gb/guide/applestyleguide/welcome/web>

PROMPT - COPY THIS

Turn this into a skill called /my-tone. Here are five of my scripts and posts: [paste]. Capture how I open, how long my sentences run, the words I use, and this banned-words list: [list]. Add these rule sets underneath: ASD-STE100 Simplified Technical English (short sentences, one idea each, plain words), Google's developer style guide for tone, and Apple's style guide. From now on, every time I correct your wording, update the skill.

Worth knowing: The skill gets better every time you correct it, so keep the last line of the prompt. Five real samples of your writing beat a long description of your style.

13 UI snipe from 21st.dev

RESOURCE

21st.dev is a library of UI components, many shared by the open-source community, made to hand straight to an agent. Copy one you like, paste it into Claude and tell it to use the component. Claude drops a proven section into your page instead of designing one from scratch, which also saves you tokens.

LINKS <https://21st.dev>

HOW On 21st.dev, search or filter and sort by **Most downloaded**. Open a component, copy it, and paste it into the prompt below.

PROMPT - COPY THIS

Install this component and swap the images for ours, matched to my design system:
[paste component code]

Worth knowing: Every component page has a **Copy prompt** button that gives you an agent-ready prompt, which is often easier than copying the code (plain code copy can need sign-in on some views). The Most downloaded sort shows in search and filter views, not on the category pages. The token saving is likely but not measured.

14 Premium components from reactbits.dev

RESOURCE

Same idea as 21st.dev, but more specialised. React Bits components are a bit edgier: animated text, glass cards, cursor effects, the kind of thing you see on high-end sites. Copy the code of one you like and give it to Claude to add to your frontend, or save it as part of your design system.

LINKS <https://reactbits.dev> · <https://github.com/DavidHDev/react-bits>

PROMPT - COPY THIS

Add this to the hero and match it to my design system:
[paste component code]

Worth knowing: Check each component's licence on its page or in the repo before you use it in a paid product.

15 Canvas UI: effects Claude Code installs itself

RESOURCE

Canvas UI has 35 unique effects, like liquid, glass, shatter and particle reveal, all free. It works with the shadcn registry, which Claude Code already knows how to use for UI components. So you just name the effect, and Claude finds the component and installs it itself, without you copy-pasting any code.

LINKS <https://canvasui.dev> · <https://ui.shadcn.com/docs/registry>

PROMPT - COPY THIS

Add the particle reveal effect from Canvas UI to the hero heading. Install it through the shadcn registry.

Worth knowing: The site lists 35 effects ("35 and counting", checked 21 September 2026). The licence is MIT plus Commons Clause, so you can use the effects in your work but you can't resell them. Install goes through the shadcn registry command; the shadcn MCP is optional.

16 Claude can't make good icons, supply them

RESOURCE

Claude can't draw good icons most of the time. Download one whole pack in a single style from Iconify or Flaticon and hand the folder to Claude to use across your design system. You get ready-made icons, and Claude gets good references for any future icons in the same style.

LINKS <https://iconify.design> · <https://www.flaticon.com>

HOW 1. Pick ONE pack in ONE style. 2. Download the whole pack. 3. Attach the folder with the prompt below.

PROMPT - COPY THIS

Use these icons across the whole design. Don't generate any icons yourself.

Worth knowing: Iconify packs are free. On Flaticon, downloading a whole pack usually needs a Premium plan.

17 Ask for SVG

PROMPT

When you ask Claude for icons, illustrations or diagrams, ask for SVG. SVG stands for Scalable Vector Graphics: it scales to any size without going blurry, you can open the file and change a colour by hand, and you can animate it. Every graphic you get back is editable and animatable.

LINKS <https://developer.mozilla.org/en-US/docs/Web/SVG>

PROMPT - COPY THIS

Make the icons and the diagram as SVG, not raster. Keep the paths clean so I can edit the colours and animate them later.

Worth knowing: SVG suits icons, logos, diagrams and flat illustrations. For photos and detailed artwork, a normal image (PNG, JPG or WebP) is still the better format.

18 Lordicon animated graphics

RESOURCE

Lordicon is a library of animated icons, and thousands of them are free. Download one as a Lottie file, which is a small animation written as code, and drop it into Claude to use. Lottie files are an upgrade on normal SVG icons, because the animation is already baked in.

LINKS <https://lordicon.com> · <https://lordicon.com/licenses>

HOW 1. Filter: **Free**. 2. Download as **Lottie (JSON)**. 3. Attach it with the prompt below.

PROMPT - COPY THIS

Place this animation above the section heading and play it once on load.

Worth knowing: The site lists 9,700+ free icons. The free licence is based on CC BY-ND 4.0 with changes: you need a free account, and free icons need a credit line on your site (details at lordicon.com/licenses).

19 Creators Toolbox

RESOURCE

If you only bookmark one thing from this video, make it the Creators Toolbox, specifically its resources section. It's one directory of over 150 free design resources: animated components, Three.js effects, SVG icons, logo galleries and even mockup kits. It even lists a couple of the ones in this video, like Refero Styles. Overall, a great resource to bookmark.

LINKS

<https://creatorstoolbox.com/most-popular-resources> · <https://creatorstoolbox.com/resources>

THE ONES SHOWN IN THE VIDEO

- OriginKit (animated components)
- ThreeUI (Three.js effects)
- Tabler Icons (SVG icons)
- Logosystem (logo gallery)
- Streetwear Mockups & Vectors Pack (mockup kit)
- Also listed: Refero Styles (tips 02 and 03) and Slop by Impeccable (tip 11)

Worth knowing: The site showed 162 results on 25 September 2026. Not everything is fully free: ThreeUI, for example, is tagged Freemium, and the streetwear pack is a premium kit. Check each resource's own licence.

Advanced

6 tips. Power-user tricks. Each one takes longer to set up and pays back on every build.

20 Feed it Apple's Human Interface Guidelines

SKILL

Apple publishes its Human Interface Guidelines for free: its whole rulebook for layout, type sizes, tap targets and colour. Turn it into a skill, and when you design an app screen, Claude follows Apple's rules instead of guessing.

LINKS

<https://developer.apple.com/design/human-interface-guidelines>

PROMPT - COPY THIS

Turn Apple's Human Interface Guidelines into a skill called /hig. Keep every number: tap targets, type scale, margins, contrast. Apply it whenever I design an app or mobile screen.

Worth knowing: The guidelines are written for Apple platforms, but the core numbers (tap target sizes, type scale, contrast) make any mobile screen easier to use.

21 GSAP for showcase-grade motion

RESOURCE

For motion that feels world-class, tell Claude to use GSAP, the GreenSock Animation Platform. It's a fast, reliable JavaScript library for smooth animation on web pages, used by a lot of top agencies. Scroll-driven sections, text that reveals as you scroll, pinned heroes: GSAP handles all of that.

LINKS

<https://gsap.com> · <https://gsap.com/showcase>

PROMPT - COPY THIS

Use GSAP for all motion on this site: scroll-driven sections, text reveals on scroll, a pinned hero, smooth scrolling. The bar is gsap.com/showcase.

Worth knowing: GSAP has been fully free since 2025, including the scroll plugins (like ScrollTrigger and ScrollSmoother) that used to be paid.

22 /design in Claude Code

SKILL

Claude Code now has an official /design command. Give it an idea or a screenshot and it opens a canvas with editable artboards, a bit like Figma. The difference is that it knows your whole workspace, your rules and your memory, so when you iterate, it already knows what you want and what you don't.

HOW In Claude Code, type the first line below. Then pick an artboard and send the second prompt.

COMMAND - TYPE IN CLAUDE CODE

```
/design a pricing page for [product], three tiers, in my design system
```

THEN PICK AN ARTBOARD AND SEND

Implement this one into the app.

Worth knowing: /design was still a research preview when this guide was written (checked 21 September 2026), so the canvas may look different in your version.

23 /tweak: sliders, then bake

SKILL

Claude Design has a built-in Tweaks panel with controls for things like type, spacing and colour. In Claude Code, build your own tweak skill that drops a slider panel onto any HTML page or frontend you make. You polish by hand, hide the parts you don't want, then it bakes the values back into the design.

PROMPT - COPY THIS

Make me a skill called /tweak. When I run it on an HTML file, inject a slider panel for font size, spacing, colours and corner radius, plus a toggle to hide any section. Let me adjust live in the browser. When I click Bake, write the chosen values into the CSS and remove the panel.

Worth knowing: In Claude Design, the Tweaks panel shows a mix of sliders and option buttons, and it may not appear on every design. The skill from this prompt works on any HTML page you open in your browser.

24 Transcript to motion graphics

TECHNIQUE

Get a word-level transcript of a video you recorded (free, with Whisper), then ask Claude to find the moments where an animation would help, research the real numbers and build the graphics timed to what you said. It's how the animations in the video were made. HyperFrames renders those HTML animations straight to MP4, so they drop right into your edit. Use your design system, so they don't look like vibe-coded AI design.

LINKS <https://github.com/openai/whisper> · <https://github.com/heygen-com/hyperframes>

PROMPT - COPY THIS

Here's the word-level transcript of my video. Find the five moments where an animation would help the viewer, research the real numbers for each, then build a short HTML animation for each moment in my design system, timed to the timestamps, and render each one to MP4 with HyperFrames. Save them to /animations.

Worth knowing: Whisper is free and open source and runs on your own computer. Ask it for word-level timestamps, not just sentence timings, so each animation can land on the exact word.

25 Build your own design operating system

TECHNIQUE

This is where it all comes together. Have Claude build a small app where every design you finish shows up and every image and video you generate is indexed, so you and Claude can find visual styles and references fast. We also keep an element library of 3D assets, motion animations and SVG icons that fit the brand, ready to reuse.

PROMPT - COPY THIS

Build me a local design OS: one HTML page that shows every finished design as a tile, indexes every image and video on my machine by describing what's in it with a vision model, lets me search by content, and copies any asset into a Claude chat with one click. Ask me three questions first: which folders, dark or light, and what I search by most.

Worth knowing: Searching images by what's in them needs a vision model to describe each file first, so the first index of a big folder takes a while and may cost a little in model usage. Start with one folder.

Where this goes next

The easy part is grabbing a better font or a nicer component. Anyone can do that in five minutes. The skill that pays is building a design setup that stays yours: a design system Claude follows, skills that hold your look and your voice, and a library of your own work that every new build starts from.

That's what we do every week inside RoboNuggets: build and sell AI systems, and master Claude Code and Claude Design along the way.

join us at

skool.com/robonuggets

Every link in this guide

Every resource mentioned in the video, with the tip it belongs to. Links and numbers were checked between 21 and 25 September 2026. Tools change fast, so check the live page before you rely on one.
